

GRIFFIN GORE

IT Systems Engineer | Software Developer

PROFESSIONAL SUMMARY

IT Systems Engineer and full-stack developer who works at the systems administration and infrastructure level while building production software end to end. Owns enterprise infrastructure, network and firewall security, M365 and Active Directory administration, endpoint compliance, and cyber incident response across a distributed, multi-office organization — and builds the custom hardware and software solutions that close the gaps commercial tools leave. Deep technical expertise across Azure, Active Directory, VMware, and modern DevOps tooling, paired with hands-on development in Python, PowerShell, Rust, and JavaScript.

CORE COMPETENCIES

Infrastructure & Cloud

Azure, VMware/ESXi, Hyper-V, Windows Server, Endpoint Central, enterprise storage

Systems Administration

Active Directory, Group Policy, O365/M365, Exchange Online, Intune, endpoint lifecycle

Security & Compliance

Cyber incident response, SOC-2, MFA & conditional access, encryption standards, PII/data protection

Network Security

Palo Alto & Prisma, Cisco ASA, Fortinet, firewall architecture & segmentation

Networking

DNS, DHCP, VPN, VLANs, VoIP, switches

Development

Python, PowerShell, Rust, JavaScript, React, Node.js, hardware/device integration

Platforms & Reporting

Azure AD/Entra ID, SharePoint, Power BI, Google Workspace

AI & Automation

AI implementation & training, process automation, workflow optimization

PROFESSIONAL EXPERIENCE

IT Systems Engineer II — Mangan Inc.

Nov 2024 — Present

- Serve as the senior technical resource for a distributed, multi-office organization — owning core infrastructure, network security, endpoint management, and M365 administration, while independently designing and shipping the custom software and hardware that supports the business.
- Lead cyber incident response end to end: detection and triage, containment, investigation, and remediation of phishing, account compromise, and malware events, followed by root-cause hardening and user communication.
- Deploy and manage enterprise firewall infrastructure, primarily Palo Alto with Prisma, handling network security, segmentation, VPN, and threat prevention across the organization; experience extends to Cisco ASA and Fortinet platforms.
- Administer the enterprise M365/Azure AD environment — Exchange Online, SharePoint, Teams, Intune, licensing, conditional access, and MFA enforcement — alongside on-premises Active Directory and Group Policy.
- Manage and maintain VMware/ESXi environments, Hyper-V, Windows Server infrastructure, and enterprise storage systems, and deploy systems with Endpoint Central (patching, software deployment, compliance enforcement) across a distributed workforce.

- Led the enterprise Windows 11 migration effort, creating the standardized Win11 image and planning and deploying the rollout to 500+ workstations.
- Spearheaded migration to Azure File Services, modernizing storage and access, improving security posture, and aligning with SOC-2 compliance requirements.
- Designed and implemented new IT infrastructure for multiple office relocations, successfully moving and onboarding 100+ employees with minimal downtime.
- Independently designed, developed, and deployed a proprietary hardware-based timeclock system serving 75+ warehouse and hourly employees — spanning Android smart scanner devices, a custom-built kiosk, and the software behind both — automating time tracking and streamlining payroll workflows.
- Built an internal application portal for managing, distributing, and securing proprietary company applications, many of which I developed in-house.
- Lead architect and project owner for an enterprise-wide PII compliance initiative, developing custom software to identify and secure sensitive data across the organization.
- Built custom budget software with advanced reporting capabilities, enabling streamlined financial tracking and data-driven decision-making for stakeholders.
- Champion and lead organizational AI adoption, training team members on AI tools and developing AI-powered automations to increase efficiency across departments.

IT Technical Specialist / Full Stack Developer — Tech-Mar (MSP) *Nov 2023 — Nov 2024*

- Administered O365/M365, Azure AD, Active Directory, Intune, and Google Workspace environments for diverse clients.
- Independently developed automation solutions in Python and PowerShell, streamlining workflows, reducing manual effort, and tailoring custom software to meet client specifications.
- Built and maintained websites and digital platforms for clients, ensuring security, usability, and long-term support.
- Owned the entire business and technical lifecycle for projects — from lead acquisition and client sales discussions, through planning and execution, to delivery and support.
- Configured and maintained VMware, Hyper-V, and Azure storage for client environments.
- Delivered client infrastructure projects: workstation deployments, Intune rollouts, SharePoint/PowerApps solutions, and Power BI dashboards.
- Provided comprehensive IT infrastructure support, from network configuration (DNS, DHCP, VPN, VLANs, VoIP, firewalls/switches) to remote desktop troubleshooting and user support.

IT Help Desk & Systems Technician — Global Geophysical *Feb 2018 — Jan 2023*

- Assisted in maintaining the company's network infrastructure and provided comprehensive desktop support.
- Prioritized and resolved help desk calls, ensuring timely issue resolution and minimal user disruption.
- Oversaw the setup of numerous desktops and managed inventory control during equipment lifecycle transitions.
- Maintained NAS drives for efficient remote access and data availability.

EDUCATION

Full Stack Developer — Coding Bootcamp — The University of Texas at Austin *Jun 2023 — Sep 2023*

B.B.A., Finance (100+ credit hours completed) — University of Houston *2020 — 2023*

A.A., Business Administration — 3.6 GPA — Houston Community College *2019 — 2020*
